

**ABSTRACT OF THE DISCLOSRE**

An adapter for a memory card having a frame metal fitting to which an end portion of the card is inserted, whereby the card is detachably fitted, and a resin-molded body core assembled in the frame metal fitting by insertion, wherein an entire thickness of the adapter being approx. the same as that of the card, the frame metal fitting having a pair of holding portions in an approx. C shape in both end portions on the side of the card attached to hold both sides of the card, a hook portion between a pair of the holding portions being detachably engaged with the end portion of the card by spring force to prevent the card from coming off, a caulking projection fixing the core by caulking to the core, and an insulative coating film formed on the outer surface of the frame metal fitting.
